

Teplians are a species designed for most settings that account for human-like and/or anthropomorphic species. As their biology is consistent with most Earthly standards, Teplians can be placed in any alternate Earth or earth-like setting that accounts for their evolution. They can also be played as having evolved on a different Earth-like planet in a sci-fi setting as they have some unusual properties and can thrive in more exotic environments. It is our hope that if you enjoy the race, you can adapt them into fiction, roleplay, and collaborative writing. If you do, all we ask is that you give credit to us for creating the species and possibly link to these documents on our pages! Thank you!

Teplians and NSFW Content

Many Teplian features make them appealing for sexual and fetish content. This document is designed to note a few of the ways Teplians may appeal to NSFW roleplayers, writers, and artists. Obviously, more unrealistic kinks can ignore certain plausible boundaries and details can be altered to suit personal interests and styles. In an effort to make this document readable by people of all limits and tolerances, below is a table of contents with search codes. While an effort has been made to order these from more vanilla to more uncommon kinks, you can use search codes to skip areas you may not be interested in reading. Not listed kinks are either self-explanatory or can be adapted as you see fit.

To use search codes, press Ctrl-F (Cmd-F on Mac) and enter in the bracketed code. For instance, searching [#LGHT] will bring you to the first section, Sex and Related Light Kinks.

I. Sex and Related Light Kinks	[#LGHT]
A. Sexual Anatomy (Sizes, Cumshots, Sensitive Areas)	[#L-1]
B. Light Kink Play (Licking, Ear/Tail/Mouth Play, Temperature Play)	[#L-2]
C. Pregnancy and Stretchiness (Light Cum Inflation, Pregnancy, Anal Sex)	[#L-3]
II. Moderate or Semi-Realistic Kinks	[#MDRT]
A. Alternate Anatomies (Herms, Shemales, Cuntboys, Unrealistic Sizes)	[#M-1]
B. Senses Play (Bondage, Temperature Play, Musk, Sensory Deprivation)	[#M-2]
C. Growth and Gain (Large Pregnancies, Inflation, Weight/Muscle Gain/Loss)	[#M-3]
D. Alcohol, Drugs, Influence (Drug Use, Drugging, Hypnosis, Mental Play)	[#M-4]
III. Unrealistic Kinks	[#UNRL]
A. Body Types (Hyper, Hyper Voluptuous, Hyper Muscle, Hyper Fat)	[#U-1]
B. Stretchiness and Alteration (Transformation, Oviposition, Inflation, Sex Change)	[#U-2]
C. Major Mind Influence (Mind Control/Alteration, Heavy Temperature Play)	[#U-3]
IV. Extreme or Highly Unrealistic Kinks	[#XTRM]
A. Bodies Under Stress (Pain, Stretching/Ruining, Bodily Damage, Snuff)	[#X-1]
B. Major Alteration (Transformation, Bondage, Packaging/Encasement/Mummification)	[#X-2]
C. Vore and Related (Soft Vore, Cooking, Hard Vore, Cock/Anal/Alternate Vore)	[#X-3]
D. Infection (Parasites, Living Insertions, Diseases, Vampirism/-thropy)	[#X-4]

I. Sex and Related Light Kinks

[#LGHT]

A. Sexual Anatomy (Sizes, Cumshots, Sensitive Areas)

[#L-1]

Male Teplian sexual anatomy is renowned for its proportionally huge girth and ball sizes. However, it is offset by its comparatively short length. Rather than rely on particularly deep penetrations, Teplian males fill and stretch holes and then use short, shallow thrusts and deep gyrations to pleasure. Their increased ball sizes are indicative of their cumshots, often quadrupling that of average humans. Balls with diameters of eight to ten centimeters (3" to 4") are considered average. Eighteen to twenty centimeters (7" to 8") in length and nine to eleven centimeters (3.5" to 4.5") in girth are considered average proportions for a Teplian shaft. Males will generally average 20 to 30 milliliters of ejaculate per orgasm. Males are more highly sensitive just behind the ballsack and just above the shaft on the lower abdomen due to the larger sexual organs required to support such virility.

Female Teplian sexual anatomy is similarly suited. Rather than having a particularly deep vaginal cavity, they instead have a shallow yet adaptive vaginal cavity. To allow a larger cumshot, the cervix is slightly wider. The womb is extremely large and loosely cylindrical in form, allowing for large quantities of male seed. Externally, much of the vagina and labia is hidden from view. The flesh over the groin is tucked and pursed where the vagina would be, forming a natural "camel's toe". When spread by a girthy enough insertion, the stretched outer flesh is highly sensitive and is considered a key target for sexual satisfaction. Breast sizes naturally do not get larger than an A or B cup. However, Teplians breasts grow with consistent stimulation and can grow as large as a D cupsize.

B. Light Kink Play (Licking, Ear/Tail/Mouth Play, Temperature Play)

[#L-2]

Teplians have highly sensitive tongues and smooth skin. In addition, their thermoception can be highly erogenous. Licking is considered an equivalent to French kissing and is highly adored, stimulating the skin and sending pleasing echoes through the local nerves. Teplian mouths are similarly sensitive, and tugging, deep kissing, or gentle touches will elicit similar effects. Understandably, oral sex is highly enjoyed. Teplian ears can be sensitive and often will "play shy" and close when teased or caressed enough. The base and underside of Teplian tails are also highly sensitive and any significant press, knead, or tug has similar effects as breast play. Finally, Teplians are stimulated and excited by cold, especially extreme cold such as ice or cold metal, and relaxed and aroused by extreme heat. Skillful temperature play with a Teplian is considered the easiest way for more vanilla couples to spice up their sex lives.

C. Pregnancy and Stretchiness (Light Cum Inflation, Pregnancy, Anal Sex)

[#L-3]

Because of the size and shape of Teplian female wombs and the flexibility Teplian bodies in general, large, repeated internal cumshots will inevitably cause light cum inflation. When filled, the female's lower belly bulges from the load. Pressing the bulge is often a kinky demonstration of a desire to become pregnant given that the fallopian tubes in female Teplians are located at the bottom sides of the womb. The large womb also allows for easier twins and triplets, and occasionally these children can be of different fathers given the possibility of staggered impregnations. Anal sex is also possible, the girthiness of Teplian shafts offset by the adaptability of Teplian bodies. Other races may consider anal sex with Teplians to be slightly looser if they do not have sufficient girth.

II. Moderate or Semi-Realistic Kinks

[#MDRT]

A. Alternate Anatomies (Herms, Semales, Cuntboys, Unrealistic Sizes)

[#M-1]

Teplians can easily support herms, semales, cuntboys, and other alternate sexes with great ease and with little change to the information provided in the primer. It is heavily recommended that those sexes with male sexual organs not omit balls as the nature of female Teplian anatomy makes it nearly impossible to fit ejaculate production without the large external organs. Additionally, any sizes listed in the "Sexual Anatomy" section can be enlarged concerning male or female sexual organs including breasts. The measurements in Sexual Anatomy are conservative realistic proportions and, in fact, are greatly reduced compared to initial Teplian designs.

B. Senses Play (Bondage, Temperature Play, Musk, Sensory Deprivation)

[#M-2]

Any bondage used on Teplians must take into account their extra flexibility and stretchiness. Too loose bondage can easily be slipped off or escaped. Handcuffs and similarly loose and low surface area bondages are less recommended when compared to armbinders, fitted and tight latex, or other more thorough bindings. As Teplians have a slightly average or below average sense of smell, musk play and scent play can be quite effective without risking overloading them. More extreme forms of temperature play can be considered as well; items hot or cold enough to cause damage to some species may still be viable and cause only minor injury or discomfort for a day or two afterwards. Sensory deprivation play is also viable. However, it should be noted that extra steps must be taken to deprive a Teplian of taste or their thermoception if that is a desired effect. Gags with mild numbing agents are recommended for the first, while the second requires either a highly controlled environment or an overwhelming heat source or insulator entirely surrounding them.

C. Growth and Gain (Large Pregnancies, Inflation, Weight/Muscle Gain/Loss)

[#M-3]

Teplians, being adaptable and stretchy, can easily be considered for large or abnormal pregnancy kinks. In addition, so long as there is something to stop leaking or outflow, inflation is also very easy for Teplians. The muscular structure of Teplians also allows for very interesting interactions with weight and muscle growth. While initial gain and loss is difficult to initiate, their bodies can be very easily convinced to grow with multiple forms of stimulation. It is especially easy to fatten or train a Teplian when their physical routine and nutrition is compounded with biochemical topical applications, magic, or, in more unrealistic settings, stereotypical substances being rubbed into the skin (e.g. lard or snack food or caramel for fattening, protein mix or tanning spray or body oils for muscle gain).

D. Alcohol, Drugs, Influence (Drug Use, Drugging, Hypnosis, Mental Play)

[#M-4]

Teplians are extremely durable in long-term. While toxins and invasive chemicals will quickly take hold and express extreme symptoms, their physiology rarely allows lethal problems to occur and will eventually, with enough time and support, restore normalcy. That being said, Teplians are vulnerable to non-lethal drugging such as alcohol, recreational drugs, roofies, concoctions designed for inducing hypnotic states or mind control, and other biochemical influences. Permanent physiological or psychological changes usually will require continued dosage and repetition over a considerable amount of time longer than many other species of similar body mass. However, their easily influenced states make play of this sort quicker to begin and often to more extreme degrees than what one might normally expect.

III. Unrealistic Kinks

[#UNRL]

A. Body Types (Hyper, Hyper Voluptuous, Hyper Muscle, Hyper Fat)

[#U-1]

There is no reason not to expect that hyper proportions and body types are possible with Teplians and every reason to expect that these could be common or otherwise easy to grow into in certain settings. Hyper sexual parts such as breasts, female “camel toes”, male testicles, and shafts, if not native to some characters, can even be encouraged to growth using magic, hormones, dermal rubs, air pumps, or any other similar stimulation and encouragement. Teplian hyper voluptuousness is exceptionally easy to reason given their already extremely voluptuous nature. The least likely hyper is most likely hyper muscular body types given their less fit averages.

B. Stretchiness and Alteration (Transformation, Oviposition, Inflation, Sex Change) [U-2]

Initial designs of Teplians tooled with oviposition as an alternate form of childbirth in high-calcium environments and with pregnancies of five or more. This can easily be reinstituted in settings as an easily influenced biological change. Extreme inflation and reshaping are easily applicable as well. With hormone rubs or injections and specific stimulations, sex changes or additional sex organs can be added or encouraged to form. Finally, more unrealistic transformations can be stimulated using similar methods, especially as advanced science or magic allows given the setting.

C. Major Mind Influence (Mind Control/Alteration, Heavy Temperature Play) [U-3]

As described in “Alcohol, Drugs, Influence”, chemical mental influence is extremely easy. With additional mind control methods such as auditory repetition, visual stimulus, sensory deprivation, neurological uplinks, and magical applications, significant mind control or personality alteration is not a far cry. Permanent effects, as previous stated, will take some time to form, but they will have earlier signs of progress with Teplians. The most notable mental influence unique to Teplians is extreme temperature play and control. Extreme heat, even that which burns or damages, will disorient, relax, and cause extreme loss of control. Extreme cold, similarly, will entirely dismiss the possibility of sleep, constantly stimulate, and make their minds race with thoughts. Extreme temperature control often is disorienting to Teplians much like pure soundproofed rooms effect humans, resulting in a feeling as though the world around them has paused, increased heart rate, and a rising need for temperature extremes to readjust.

IV. Extreme or Highly Unrealistic Kinks [XTRM]

A. Bodies Under Stress (Pain, Stretching/Ruining, Bodily Damage, Snuff) [X-1]

Teplians bleed much like any other race. While resistant to abrasions and scrapes, Teplians do bruise and cut and suffer most damage like any other species. However, they do not necessarily feel the same pain which would normally correspond with said damage. Teplians often underplay injuries not necessarily because of recklessness but because they cannot accurately judge their own injuries. As such, after injury or BDSM play, caring dominants may need to explain the extent of inflicted injuries to a Teplian sub. Physical trauma is the highest cause of death among Teplians and must be treated with caution if survival of a sub is important to the dominant. This does mean that many snuff methods are especially effective on Teplians. The only exceptions are oxygen deprivation methods such as hanging or drowning; Teplians can survive for surprising amounts of time without oxygen flow or with spinal damage.

One of the most common and easily caused permanent alterations and extreme kinks is hole stretching and ruining. Given their stretchy nature, Teplians are not often broken by large insertions. However, if repeated large insertions, outward forces, and/or plugging is done, Teplians can be stretched to the point of no return. Vaginal openings, cervixes, anal sphincters, mouths, throats, nose holes, and even urethras can be reduced to barely functioning gaped holes if caused. This is an extremely easy way to humiliate or degrade a Teplian, though depending on the holes gaped daily life may be altered significantly. Other permanent alterations such as amputation, castration, or hole sealing are options. The decentralized neurology of Teplians, however, can have strange effects. Lost limbs and appendages may still be able to function in limited ways, and a Teplian may experience sensations of missing parts for some time after separation. With magic or stimulation, this can result in unique part-removal play.

B. Major Alteration (Transformation, Bondage, Packaging/Encasement/Mummification) [#X-2]

Without the constraints of a realistic setting, Teplians with their easily influenced biology and structural flexibility can be perfect subjects for transformation, reshaping, unique and creative bondage, and packaging. With appropriate substances, their dermal absorption can be used as a method of initiating extreme transformations (e.g. body concrete resulting in petrification, chocolate or caramel or icing for food transformations, slimes for melting transformation, fluid glass for transformation into living bottles). Extremely unrealistic transformations can even result in pouring Teplians into new shapes or items like dildos, balloons, clothes, rags, casks, condoms, blow-up dolls, or anything desired. Magical dominants might even consider kneading Teplians into dough or reshaping their bodies as easily as Play-Doh.

Similarly, their flexibility can result in tight packaging, encasement, or mummification that would otherwise be too tight, misshapen, or convoluted for some species. In sillier settings, this might result in Teplians being pulled through glory-holes, stuffed in closet trunks or luggage, tightly encased in latex, or otherwise immobilized or built into things. Placements as trash cans, urinals, public use stations, drink dispensers, vases, cushions, statues, or other objects are hardly impossible when given the full possibilities of a species with smooth skin, flexible bodies, and plush weight.

C. Vore and Related (Soft Vore, Cooking, Hard Vore, Cock/Anal/Alternate Vore) [#X-3]

Teplians have potential to be both predator and prey. Stretchy anatomy and extremely efficient biological systems for processing food allow for significantly sized prey for soft vore, and the extensively developed senses of taste may easily give rise to Teplians seeking uniquely flavored meals for hard vore. However, their own large nutritional content, smooth bodies (excepting easily removed head hair), and concentrated size just as easily put them in the role of prey. Vulnerabilities and attractions to warm and

humid places do not do Teplians any favors when looking down a predator's mouth. Teplians are also fully capable predators to consider for alternative vores such as cock, anal, and even more exotic types like bellybutton and urethral. As such, Teplians are uniquely capable for covering an incredibly wide range of vorish interests for interested users.

Something which deserves special recognition, however, is cooking. As a species incredibly interested in the culinary arts and finer aspects of eating, they are in a wonderful position to serve as vorish chefs and meal preparers. However, the extreme temperature differences of the kitchen, often bondage-heavy fields of meat raising, packaging, and storage, and wide uses for flexible and easily shaped, altered, marinated, and manipulated ingredients put the Teplian prey as an enviable ingredient. Their permeable skin makes them especially easy to add flavor to, and their easily influenced bodies can always change them into whatever may be required. Finally, while some species denature and die quickly under stressful kitchen situations, Teplians can still function with denatured muscle and meat and often can survive kitchens in slightly (very slightly) more realistic settings.

D. Infection (Parasites, Symbiotes, Living Insertions, Diseases, Vampirism/-thropy) [X-4]

The final set of extreme kinks which deserve some mention concerning their relationship with Teplians are the kinks concerning infections, parasites, diseases, and other afflictions. As previously stated, Teplians are notoriously easy to actually be infected, poisoned, or otherwise influenced and show earlier and stronger symptoms than other species. However, they will usually process these invasive alterations over a long period time and eventually flush them out. This is not always the case, though, and advanced non-lethal parasites, symbiotes, insertions, and afflictions may be able to convince the Teplian's biology to adapt to their presence. Transformative -thropies (such as lycanthropy), vampirism, c-snakes, symbiotes or parasites which replace body parts, and other things can easily find their home in a Teplian host.
